

StorageX 8.0 Dev Ops Use Case

Business Challenge

- Are you using business analytics to make better business decisions?
- Have you struggled getting the file data you want to analyze all together in one place?

New Business Analytics can provide valuable insight into your company records. For example, organizations are deeply analyzing customer web traffic to improve web design and product sales. The challenge is how to get all the data you wish to analyze in the right location for analysis. What you need is a file management API so you can programmatically move the files you want to the location you need for analysis.

How StorageX Cloud Tiering Works

StorageX provides a RESTful API allowing you to programmatically control all its powerful file management functions. Copy, move or archive files based on file criteria you specify.

We believe you should always have direct access to your files, we build around industry standards. You will have access to your Files, where you need it, when you need it, in the form you need it.

- Program automated data movement policies to facilitate the transfer, or migration, of SMB/NFS source files to S3 Object storage and traditional file storage resources. Move an entire share or export to a new share or export.
- Make StorageX the core of your storage management strategy. Move files from NAS to Object and NAS to NAS, and avoid the technology lock-in that results from products that operate in the data path.
- StorageX SDK APIs allow for enterprise management applications, business applications, or development applications to directly invoke StorageX data management actions such as archive, delete, copy, or transform files.

Why StorageX Dev Ops

We believe that you should be in full control of your data. To that end, we provide a robust API that provides you with access to the full power of StorageX.

Imagine the difference it makes to your business when you have full control of your data.

- Move files easily across heterogenous storage resources, placing data where you need and when you need it.
- Automate routine file management tasks, raising IT staff productivity and for customer facing applications, improving customer satisfaction.

About Data Dynamics

[Data Dynamics](http://www.datadynamicsinc.com) is a leader in intelligent file management solutions that empower enterprises to seamlessly analyze, move, manage and modernize critical data across hybrid, cloud and object-based storage infrastructures for true business transformation. Its award-winning StorageX platform eliminates vendor lock-in and provides a policy-based, storage management platform to provide the insight, agility, and operational efficiency to transform your data assets into competitive advantage. Used today by 24 of the top Fortune 100 companies, StorageX has optimized more than 160 PB of storage, saving more than 80 years in project time and \$80 million in total storage costs.
