

StorageX 8.0 Archive Retrieval

Business Challenge

- Are you facing a compliance audit or a legal discovery court order and you need to quickly search and retrieve files from the archive repository?
- Are you looking for a non-proprietary solution to retrieve files from the archive repository?

Businesses store all types of unstructured files containing valuable business information long-term with the hope they never have to retrieve them. But, should they be caught in a regulatory compliance audit or a legal dispute, they need access to the archive – fast. The challenge they face is how to search and retrieve files quickly from the archive while incurring minimal cost. Purpose-built archive solutions are available, but they are costly and they lock you into a proprietary solution. Even if you seldom retrieve files from the archive, you must continue to pay the archive license, or lose access to your data. You need an archive solution that stores your files economically, in native format, without vendor lock-in.

How StorageX Archival Retrieval Works

StorageX Retrieval Portal is used to find and retrieve archived data on the S3-compliant object storage resource(s) to which you have access. StorageX supports direct access using standard S3-compliant software tools. In lieu of the StorageX Retrieval Portal, you can access your S3 Objects directly using S3-compliant software.

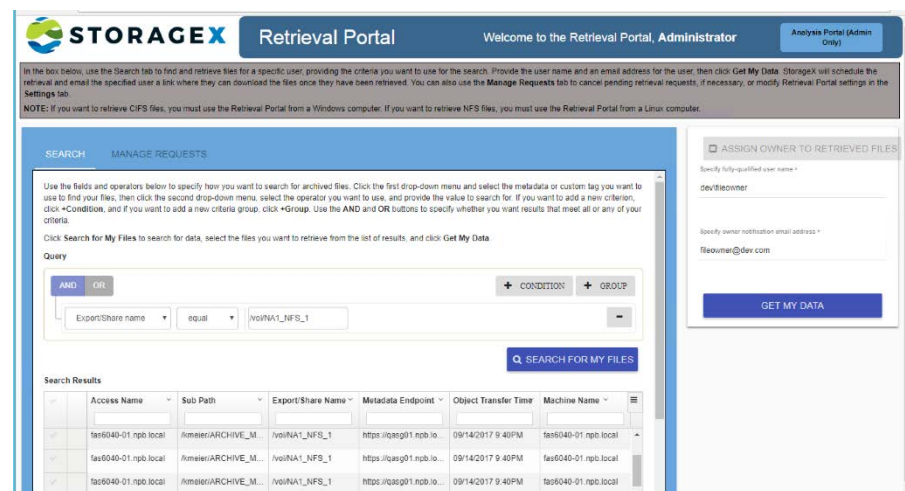

- The StorageX Retrieval Portal is a S3-compliant web-based application admins can use to search and retrieve file objects from object storage.
- Save files back on local file share for audits and legal discovery.
- Directly access your object files using any S3-compliant browser.
- Program custom applications to read files using a S3-compliant REST API.
- At no time, do you incur license fees to read your archive files.

Why StorageX

StorageX is the only archive solution that puts you in complete control of your data. Once your archive files are stored in S3-compliant Object storage, using StorageX, you are free to access your data directly using any S3-compliant software.

- With StorageX, you are free to store your archive data for years without incurring any archive license fees
- Archive files always remain in native format. Add custom meta information to classify archive records.

About Data Dynamics

Data Dynamics is a leading provider of intelligent file management solutions that enable analysis, migration, management and modernization of large data assets across proprietary storage types, including S3 object storage. Its award-winning StorageX product suite eliminates multi-vendor storage silos providing enterprises with an intelligent, policy-based, cloud storage management platform to empower data portability, usability and insight for business agility and operational efficiency. StorageX has been adopted by hundreds of enterprise customers, Fortune 500 companies, and large municipal governments to increase storage portability for the simplified adoption of next-generation heterogeneous datacenter and cloud infrastructures. www.datadynamicsinc.com

Unlock the power of your data and act to manage valuable storage assets.
