

Who controls your data now?

Managing data across heterogenous storage resources is complex, risky and expensive

- No direct access to files; user access via physical gateway or software appliance; archive portal
- Disruptive to bring in and out (two outages); vendor lock-in
- File stubbing and file sharding creates vendor lock-in
- Does not scale for large environments

↓ Access via processor

Don't let your data be trapped

You no longer own your data!

It's time that YOU control your data.

Data Dynamics and StorageX makes it easy. **Your data—your way.**

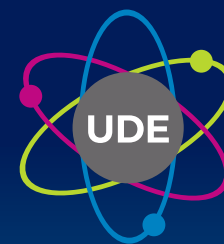

Direct Access

- Direct Access to Your Files, Your Way (SMB, NFS, S3).
- No Gateway. No File Virtualization. No Proprietary Namespace. No stubbing. No sharding.
- Automated source mapping and provisioning at destination.
- File Transform, access control updates, and File to S3 Object conversion..
- Policy engine based. Industry standards based.

Your data is always yours!

StorageX Universal Data Engine

- Unlimited Scale.
- No limits.
- Out-of-Band Data Processor
- File Transforms.
- No Agents.

Free your File Data. No Lock-In Anywhere.
