MOBILITY CERTIFICATION PATH

Migrating data across heterogeneous storage resources is complex, risky, and expensive. StorageX puts you in control of your data and enables you to manage your storage infrastructure based on industry standards. This allows you to have your data in the right time, place, and format with StorageX.

This Learning Path is designed to help "Learners" to prepare for the **Professional Level Certification** in the Data Dynamics product suite for **Data Mobility**. Learners should plan to take the Final Certification Exam, as these ILTs, videos, and hands-on labs will help get them started on the way to becoming a Professional.

Prerequisites:

Learners should be familiar with the basic concepts and operations of CIFS/SMB and NFS file, folder, and share/export management. Learners should also be familiar with Microsoft Distributed File Systems (DFS) and have a general understanding of and experience with enterprise storage software and hardware.

Learning Objectives:

- Understand the Data Dynamics Mobility Offerings and how best to leverage their features.
- Know how to utilize the StorageX Data Migration platform for seamless Data Movement of unstructured data.
- Learn how to execute metadata-driven data management with StorageX Analytics.
- Understand how to utilize the metadata analysis for unstructured data to provide actionable insights through a single pane of glass.
- Know how to move/transform and synchronize file data to object storage using StorageX.
- Learn to retrieve Archived data from object storage using StorageX efficiently.

Audience:

All users who want to become certified Professionals with the StorageX product.

Registration Process:

The **Mobility Certification** exam is now available through the **Data Dynamics Training Portal** (https://training.datadynamicsinc.com/). To create a new Data Dynamics Training Portal account, contact the Training team at training@datdyn.com to request an account.
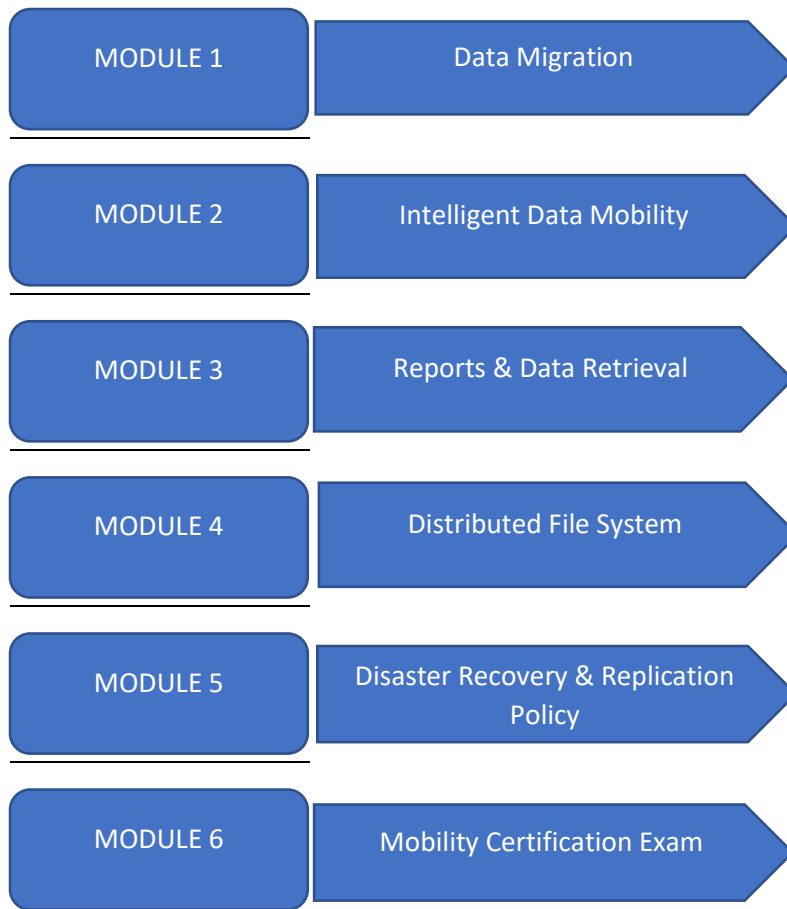

If a Learner is an existing Training Portal user, they can find all six modules under the **Mobility Branch**. For upcoming ILT classes and schedule, check the available events in the **Calendar** tab on the Training Portal Dashboard.

Description:

The Mobility Certification path is divided into **six modules**, and each module is divided into videos and ILTs, the final test, and e-books. Five of the modules provide the course content, while the sixth module leads the Learner to the Certification Exam.

To access and unlock the Final Certification Exam, the candidate must complete all five previous modules, and the Module Level Certification for each.

MOBILITY CERTIFICATION PATH

MODULE 1	Data Migration
MODULE 2	Intelligent Data Mobility
MODULE 3	Reports & Data Retrieval
MODULE 4	Distributed File System
MODULE 5	Disaster Recovery & Replication Policy
MODULE 6	Mobility Certification Exam

About the Mobility Certification Exam

To be a Data Dynamics-certified **Mobility Professional**, Learners should take the **Final Certification Exam** available on the Training Portal. The Final Certification Exam is a timed assessment consisting of 30 questions, and Learners will have 60 minutes to complete the exam.

To unlock the Final Certification exam, complete all the Module Level Certifications and then contact the Training team at training@datdyn.com for an exam password. Scoring 80% or above will qualify the Learner to achieve their Certificate.

Learners get only *one* chance to attempt the Final Certification Exam. In the case of an unsuccessful attempt, Learners will be required to submit a request to the Data Dynamics Training team at training@datdyn.com to try again.

NOTE: Attendance during Training sessions does *not* guarantee passing the Final Certification Exam and/or earning the certificate. From the time the Learner registers for the Final Certification Exam, a period of 30 days will be provided to complete the exam.

About Downloadable E-books

Every module contains a **downloadable e-book**. This is a "handbook" for Learners to review and recall what they have learned in the individual modules.

Each e-book is a blend of all the training materials used in the modules. Every Learner gets an opportunity to quickly go through what they have learned instead of re-watching and re-taking the ILTs, although Learners can take an ILT attend again if they want to.

Note: The e-book only provides the content for the topics covered in videos and presentations included in each module. In order to complete labs and demos, Learners need to attend lab training, and for detailed steps and information, read the *StorageX Administrator's Guide*.

After successful completion of the Certification Exam

Upon successful completion of the exam, Learners will receive a **Data Dynamics Certificate** and can share the certificate on their social media accounts.
